

# OSIS App BUGS

## Payment Issues:

- a. If Paypal is turned on, Pay with Crypto not working
- b. Stripe-- it shows success but the user money does not get debited, many users got tokens without actually paying
- c. If I select CAD as a currency and buy tokens of 10 CAD, on the stripe Page, we see 5 USD [ whereas 1 CAD = ! 1 USD, so the calculation is wrong in the case of Stripe non USD currency]
- d. Paypal Referral not working
- e. Stripe page: it requires real validation, card, CVV. The date can only number, also CVV must be 3digits number, not 4
- f. Referral not working with PayPal

## Other Issues

- g. Users can not buy tokens more than tokens that are to be sold

- h. Change password: user can not use the same password while changing the password
- i. Reduce the FIAT decimals to 2 only

## Currency Conversion

Enter the amount of OSIS you would like to purcha

|       |      |   |              |
|-------|------|---|--------------|
| 10000 | OSIS | = | 5,000.000000 |
|       |      |   | USD          |

✔ 5 USD (10 OSIS) Minimum contribution amount is required.

- j. When the user selects Paypal for payment, we get a toaster message, replace the text with this text: " You will now be directed to PayPal "
- k. Also, when users buy tokens, take fees from them, let's say I bought 500 USD worth of tokens, first check if my balance is 0 or not.  
If my balance is zero, then charge me 500 USD + 1.7 XLM [ you'll get the price of XLM in USD]  
and credit me 500\$ worth of tokens, same for any currency be it ETH, BNB, GBP ...  
If my balance is > 0, do as it is currently i,e no changes
